

Solid ink colors: true, vibrant...and earth-friendly.

Solid ink's cartridge-free design and minimal packaging, its nearly waste-free printing process and its safe, toxin-free solid ink sticks make it a very environmentally-conscious way to print.

Solid Ink printers and MFPs.

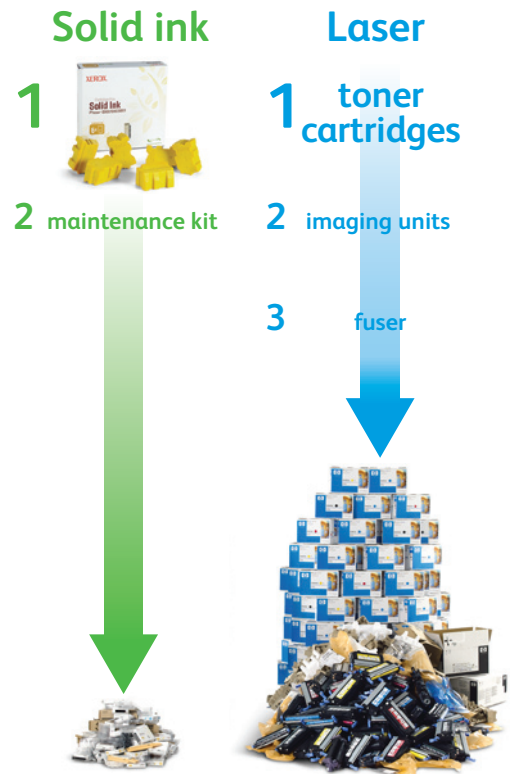

Less consumables means less to throw away.

When a **laser printer** runs out of toner, you are left with big, bulky print cartridges that need to be disposed of. Not to mention other replaceables such as fusers and imaging units.

Solid ink printers use compact solid ink sticks with no cartridges. So when you run out of ink, there's nothing left to throw away. And because the ink sticks are so small, there's also less packaging to recycle. The only other replaceable unit is a maintenance roller. This lasts for tens of thousands of pages, so it only needs to be replaced a few times in the life of the printer.

Consumables

Over the 4 year life of a typical cartridge-based toner printer, the waste generated amounts to 450 lbs. A Xerox solid ink printer produces only 23 lbs. of waste!

Waste from 1 printer

Safe and clean.

Resin-based solid ink sticks are completely safe and clean, and contain no solvents. Unlike laser print cartridges, they cannot spill, leak or smudge on your clothes.

Save valuable real estate.

Besides drastically reduced landfill waste, Solid ink's cartridge-free design and minimal packaging also means less energy used during manufacturing and less storage space for better transportation efficiency and fewer delivery trucks on the road — saving you shipping costs while benefiting the environment. Solid ink packages are small enough to fit in your desk drawer, saving your work environment too. There's no need to take up an entire cabinet with printer supplies.

Multiple functions use less power.

When you choose a solid ink MFP, it does the work of several stand-alone office products (printer, copier, scanner and fax) while consuming less electricity.

Recycled paper welcome

Because solid ink prints the same vivid color on any paper, you can use recycled paper for all your printing. You don't need expensive, super-white paper to get superb image quality. Plus, you can recycle solid ink printouts.

More ways to save with solid ink

Efficient use of paper

Standard features like automatic two-sided printing and copying and N-up printing fit more output onto a single sheet, saving time, trees and money.

Save more with free software

With every Xerox solid ink printer or MFP you buy, you can download GreenPrint™ software for free. It automatically highlights and removes unwanted pages — like that last page with just a URL, banner ad, logo, or legal jargon — prior to printing. A reporting feature keeps track of the pages and money you've saved.

Scan to save paper

The email and scan-to-file capabilities on solid ink MFPs replace the need to mail hardcopy documents, reducing paper inventories and minimizing the energy required to deliver documents by air or ground transportation.
